

Proposed Structure for y2 Modules

Proposed Namings for y2 Modules

New Module Name	Existing Module Name	Purpose
y2_module_base_test	y2_common	Base test package for all the y2 modules tests. Only subs that should be shared and could be applied to any module test are here.
y2_module_gui_test	y2x11test	Base test package for y2 modules tests with GUI (Wayland, X11). Only subs that should be shared and could be applied to module test with GUI are here.
y2_module_console_test	console_yasttest	Base test package for y2 modules tests in console (ncurses). Only subs that should be shared and could be applied to module test in console should be here.
y2_install_base_test	Does not exist	Base test package for all the y2 installation tests (it should replace y2logsstep in this role, as y2logsstep is about logs. No idea how it started to be a parent for all y2 installation tests)
y2_logs_helper	y2logsstep	A library, that provides subroutines for y2 logging. Should be used as import instead of being parent for all the installation tests.
