Description

Slenkins guys would like some metadata about the disk image to be available on the disk image

Required info includes
- Build Number of the OS that built the image
- URL of the test that made the image

This information might also be useful in the /hdd repo for the asset, but having it on the disk image is essential for when they're debugging issues with the running image.

History

#1 - 2016-01-15 16:03 - RBrownSUSE
- Checklist set to [ ] SLE, [ ] TW, [ ] Leap
- Priority changed from High to Low
- Target version deleted (154)

Reduced to low, as the main item (Build Number) is already present in /etc/YaST2/build

#2 - 2017-01-05 19:49 - okurz
- Status changed from New to Rejected
- Target version set to future

okurz: we are not very often generating SLEnkins images out of openQA assets
okurz: but we keep it as a possibility, especially when there is some major failure somewhere in the images process, as a backup
okurz: when someone tests from an image, it is nice to be able to track back how this image was built
okurz: you can get some of the info from the image name, but it might not be complete
okurz: but the question is, would openqa people benefit from this feature too?
i mean, it's by no way slenkins-specific
i'd say, please judge it in the light of usefulness for openqa, and don't bother about /me having the idea

So the request in general would be nice but no action since a year and not so much happening. We would not block corresponding PRs of course but keeping this around probably won't help.
