[sporadic] os-autoinst: flaky test t/13-osutils.t

2021-12-05 18:30 - okurz

Status:	Rejected	Start date:	2021-12-05
Priority:	Normal	Due date:	
Assignee:	okurz	% Done:	0%
Category:	Concrete Bugs	Estimated time:	0.00 hour
Target version:	Ready		
Difficulty:			

Description

Observation

Observed in GHA and locally

```
## Run 18
t/13-osutils.t .. 1/?
#   Failed test 'Exit code appear in log'
#   at t/13-osutils.t line 167.
# STDERR:
# [2021-12-05T11:03:37.186582+01:00] [debug] running `echo foo`
# [2021-12-05T11:03:37.194499+01:00] [debug] Command `echo foo` terminated with 1
#   foo
#
# doesn't match:
# (?^u:terminated with 0)
# as expected
# Looks like you failed 1 test of 10.

#   Failed test 'run_diag'
#   at t/13-osutils.t line 190.
# Looks like you failed 1 test of 9.
t/13-osutils.t .. Dubious, test returned 1 (wstat 256, 0x100)
Failed 1/9 subtests
```

Reproducible

Locally I could only reproduce it in 1/500 (!) runs with runs=500 count_fail_ratio prove -l. t/13-osutils.t

runs=500 count_fail_ratio make test-perl-testsuite WITH_COVER_OPTIONS=1 TESTS=t/13-osutils.t yields

```
## count_fail_ratio: Run: 500. Fails: 5. Fail ratio 1%
```
