Target version:			
Difficulty:			

Description

Observation

Soft-failure in gdm login screen that shows fullname instead of username is caused by this:
https://openqa.suse.de/tests/7852673#step/first_boot/2

"default_user_simple_pwd" uses different "User's Full Name" from "user_settings" (e.g. https://openqa.suse.de/tests/7852674#step/user_settings/4) when creating new users during installation. They should be the same.

openQA test in scenario sle-15-SP4-Online-E-Staging-s390x-ext4_staging_s390x@s390x-kvm-sle12 fails in [default_user_simple_pwd](#)

Test suite description

Testsuite maintained at <https://gitlab.suse.de/qa-maintenance/gam-openqa.yml>. Maintainer: QE Kernel, QE Yast

Reproducible

Fails since (at least) Build [E.64.10](#) (current job)

Expected result

Last good: [E.64.8](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2022-01-20 07:17 - zcjia

Asked original author at <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/12831>

#2 - 2022-01-21 08:12 - zcjia

- Status changed from New to Resolved

Removed the soft-failure tag, because developer explains this was old expected behavior.
