Category:	Feature requests	Estimated time:	0.00 hour
Target version:	Ready		
Difficulty:			
Description			
Motivation			
<p>As a test reviewer and member of one of many QA squads I want to find unreviewed openQA test failures on /tests to have access to a single page showing all recent failures needing review work. With #103765 the todo parameter already works on /tests but users need to know about it so make sure the parameter is described in documentation.</p>			
<p>Also see parent #93246</p>			
Acceptance criteria			
<ul style="list-style-type: none">• AC1: The query parameter "todo=1" on /tests is explained in documentation			
Suggestions			
<ul style="list-style-type: none">• Research how the query parameter for todo on /tests/overview is referenced in documentation and do the same for /tests• Look at the PR https://github.com/os-autoinst/openQA/pull/4450 which implemented it• Test with different parameters and confirm how it's used by end users

Research how the query parameter for todo on /tests/overview is referenced in documentation and do the same for /tests

Unless I'm missing something it is not referenced at all. The only documentation is the help-popover which I've already added as part of [#104995](#). I'm also wondering whether it makes sense to add extra documentation for the flag since the help popover should be sufficient considering the checkbox is placed where users should be able to discover it on their own.

Not exactly true because there is http://open.qa/docs/#_filtering_test_results_and_builds but that's far below what I expected would be there already.

I'm also wondering whether it makes sense to add extra documentation for the flag since the help popover should be sufficient considering the checkbox is placed where users should be able to discover it on their own.

Well, I agree that having a help in UI is often better and likely reaches more people than documentation. However I think describing certain workflows in the documentation can still be beneficial. But you can also consider extending the UI help text. Because right now it also just says something like "fix all these todo jobs to get a black badge", not what that actually means.

If you find all that unclear feel free to unassign again. I might find the time to think of what I want to see and put it there myself :D

We should estimate it first, but maybe a nice one for [kodymo](#) since it's a good excuse to learn about our API and see if it makes sense to someone less experienced
