It's not resolved, I have something in progress to improve it.

I'm creating copy of the hana installation content e.g. 51055101_small with only HDB_SERVER_LINUX_X86_64 until <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/14846> is done, because this is ridiculous.

Cloned tests are passing under 20 minutes, while the default <https://openqa.suse.de/tests/8750065> is hanging on copying useless stuff, rotating n times and creating another investigation clones ...

<https://openqa.suse.de/tests/8750162>

<https://openqa.suse.de/tests/8750383>

Worker in Prague when copying just 3G will still fail ...
