Target version:	Ready		
Difficulty:			

Description

User story

Using the force_result feature still feels a bit bulky, because of the complex syntax that at least my brain fails to remember. While the provided info box contains all relevant information, it does not allow to copy&paste the template. When I use the force_result feature I typically end up to have to open the info box twice before I get the syntax right and this is annoying.

The screenshot shows a web interface for an issue. At the top, there's a result summary: "Result: failed, finished 6 minutes ago (01:40 minutes)". Below that, it says "Clone of 8778357 (restarted already 1 time)" and "Scheduled product: job has not been created by posting an issue". The assigned worker is "openqaworker5:25".

The main content area has tabs for "Details", "Logs & Assets", "Settings", "Investigation", "Comments (1)", and "Next & previous results". A comment by "ph03nix" is visible, dated "2022-05-19 07:29:40". The comment text is partially obscured by a semi-transparent overlay that explains the force_result label syntax. The overlay text includes: "One special label format is available which allows to forcefully overwrite the result of a job using a comment. The expected format is label:force_result:new_result[:description], for example label:force_result:failed or label:force_result:softfailed:bsc1234. For this command to be effective the according user needs to have at least operator permissions. Also GitHub pull requests and issues can be linked using the generic format marker[#project/repo]#id, e.g. gh#os-autoinst/openQA#1234. You can also write (or copy-paste) full links to bugs and issues. The links are automatically changed to the shortlinks (e.g. https://progress.opensuse.org/issues/1111@ turns into poo#1111@). Issue references are automatically carried over to the next jobs in the same scenario when the".

Below the comment, there is a "Write your comments here" text area and a green "Submit comment" button.

This is a feature request to provide another button next to the info button, the prefills the force_result template in the comment box. Alternatively make the text in the info box selectable, so that we can use copy&paste.

Acceptance criteria

- **AC1:** Templates can be easily discovered and copied into new comments

Suggestions

- Provide an additional button that pre-fills the comment box with `label:force_result:[passed|softfailed|failed]:BUGREF`
 - e.g. within a drop-down menu or even within the tooltip or as a separate button
- Make the text in the infobox selectable for copy&paste
- Toggle the info like in the YAML editor e.g. https://openqa.suse.de/admin/job_templates/409 (or any other job group)
- Implement something, try it on staging and ask for feedback

History

#1 - 2022-05-19 07:30 - ph03nix

- Description updated

#2 - 2022-05-19 07:31 - ph03nix

- Description updated

#3 - 2022-05-19 07:42 - okurz

- Category set to Feature requests
- Priority changed from Normal to High
- Target version set to Ready

Awesome idea! Haven't thought of that yet :)

#4 - 2022-05-19 09:29 - mkittler

- Subject changed from template button for force_result to Template button for force_result size:M
- Description updated
- Status changed from New to Workable

#5 - 2022-05-19 12:35 - mkittler

- Status changed from Workable to In Progress
- Assignee set to mkittler

#6 - 2022-05-19 15:14 - mkittler

PR: <https://github.com/os-autoinst/openQA/pull/4661>

#7 - 2022-05-20 04:19 - openqa_review

- Due date set to 2022-06-03

Setting due date based on mean cycle time of SUSE QE Tools

#8 - 2022-05-20 08:16 - okurz

- Due date deleted (2022-06-03)
- Status changed from In Progress to Resolved

PR merged and deployed. Just a random example <https://openqa.opensuse.org/tests/2356101#comments> shows the icons. I hope you like it :)

#9 - 2022-05-20 08:55 - ph03nix

Nice! This is really neat :-)
