Description			
Dear Admins,			
The swiss mirror, http://pkg.adfinis.com/opensuse , seems not to be used for package redirects anymore.			
A quick manual check of a file that has been around for a few days: https://download.opensuse.org/tumbleweed/repo/oss/x86_64/kernel-default-5.17.9-1.1.x86_64.rpm.mirrorlist does not list the CH server (only hostsuisse.com is listed)			
http://pkg.adfinis.com/opensuse/tumbleweed/repo/oss/x86_64/kernel-default-5.17.9-1.1.x86_64.rpm does exist though and the mirror seems to be in good standing order.			
Thanks for looking into that.			
Cheers, Dominique			

History

#1 - 2022-05-31 14:30 - pjessen

- Category set to Mirrors
- Assignee set to andriinikitin
- Private changed from Yes to No

#2 - 2022-06-30 13:54 - andriinikitin

- Status changed from New to Resolved
- % Done changed from 0 to 100

This should be resolved now, the report at <https://mirrors.opensuse.org/> shows that pkg.adfinis.com is in good shape.
