Category: Bugs in existing tests	Estimated time: 0.00 hour
Target version:	
Difficulty:	

Description

Observation

The server used to test wget (www.zq1.de) currently returns error 503 (no server available)
Not much we can do from our side, I'm afraid - but we need to track it (and if no solution happens on that server, use a different target server)

openQA test in scenario opensuse-Tumbleweed-JeOS-for-kvm-and-xen-x86_64-jeos-extra@64bit_virtio-2G fails in [wget_ipv6](#)

Test suite description

Same as jeos, plus some more tests.

Reproducible

Fails since (at least) Build [20210824](#)

Expected result

Last good: [20210823](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

- Subject changed from *wget_ipv6: www.zq1.de returns error 503* to *[security] wget_ipv6: www.zq1.de returns error 503*

We could just use <http://static.opensuse.org/favicon.ico> instead. The test says it would test fallback from IPv6 to IPv4 but we don't ensure this and I don't think it even does this anymore. www3.zq1.de resolves to 2a01:4f8:221:b52::2 . I doubt we would actually fallback to IPv4. And we already have `tests/console/wget_https.pm` that does more. I think we can simply ditch this test module and replace by `wget_https.pm` which so far is used within the scope of "security" tests.

@security I suggest to replace all uses of `wget_ipv6.pm` with `wget_https.pm` and delete `wget_ipv6.pm`, agreed?

Hi [okurz](#),

Thanks for the comments, and I agree with you `tests/console/wget_https.pm` can cover `wget` function as well.

However, the issue can't be seen in the latest build 20220605.

It is fine for any job re-use the test module `wget_https.pm`, we can add more functions there if any requirements :)

[dimstar](#),

Could we close this ticket now since it can't be reproduced :)

#4 - 2022-06-10 10:12 - dimstar

- *Status changed from New to Resolved*

Considering that this server rarely caused that issue, I think we are ok to stick to it. If it starts failing our tests too often we should switch to a test server under our control
