Description

Observation

python has been switched to be verion3.10 be default. All python3-* provides have been moved to the python310-* packages.

for tvn, though, this is not applicable, due to:

```
%define skip_python2 1
# https://github.com/apache/tvm/issues/8577
%define skip_python39 1
%define skip_python310 1
```

This means, only python38-tvm is bein built, but by convention, this package does not get the python3-* symbol (non-primary python interpreter)

It's not clear at this point if the test should be adjusted to use python38-* explicitly) or if the package should be reworked to be python3.10 compatible.

#2 - 2022-07-16 00:02 - openqa_review

This is an autogenerated message for openQA integration by the openqa_review script:

This bug is still referenced in a failing openQA test: extra_tests_ai_ml
<https://openqa.opensuse.org/tests/2469930#step/tvm/1>

To prevent further reminder comments one of the following options should be followed:

1. The test scenario is fixed by applying the bug fix to the tested product or the test is adjusted
2. The openQA job group is moved to "Released" or "EOL" (End-of-Life)
3. The bugref in the openQA scenario is removed or replaced, e.g. label:wontfix:boo1234

Expect the next reminder at the earliest in 28 days if nothing changes in this ticket.
