openQA Tests - action #115478

[qe-core] test fails in zypper_log_packages - uploading logs seems to fail due to WORKER_HOSTNAME not being always available

Description

The new module appears to use autoinst-url in test code, but that URL is only usable from inside the SUT. It works (by accident?) on multimachine configured workers, as those have 10.0.2.2 assigned to br1.

Observation

openQA test in scenario opensuse-15.4-KDE-Live-aarch64-kde-live@USBboot_aarch64 fails in zypper_log_packages

Test suite description

riafarov: I've increased RAM from 1536 to 2048

Reproducible

Fails since (at least) Build 7.10 (current job)

Expected result

Last good: 7.9 (or more recent)

Further details

Always latest result in this scenario: latest

Interestingly this seems to only affect aarch64 workers. Anyway for a clean fix we need some small tweaks in the testapi of os-autoinst to force autoinst_url() to use the worker ip when requested.

It affects all workers without a multi-machine setup. i.e. it works on openqa-aarch64, but not the other "cloud" workers (ip-*).

Anyway for a clean fix we need some small tweaks in the testapi of os-autoinst to force autoinst_url() to use the worker ip when requested.

- Status changed from Feedback to Workable

Still broken: https://github.com/os-autoinst/os-autoinst/pull/2149#issuecomment-1230425040

#9 - 2022-08-30 09:11 - szarate

Dominik, let's switch to `save_ulogs` to copy the contents of the file directly to the ulogs directory: save_ulog($out, $filename);

#10 - 2022-08-30 09:12 - szarate

When you're done, you can remove the workaround that's currently configured on the o3 worker ow19 (see #111473#note-61).

The PR was merged, I removed the workaround.
