Category: Good First Issues
Target version: Estimated time: 0.00 hour

Description
opal fails with

```c
[ 1571s] /home/abuild/rpmbuild/BUILD/opal-3.18.8/plugins/audio/iSAC/iSAC/typedefs.h:61:2: error: #error Please add support for your architecture in typedefs.h
/home/abuild/rpmbuild/BUILD/opal-3.18.8/plugins/audio/iSAC/iSAC/typedefs.h:65:2: error: #error Define either WEBRTC_ARCH_LITTLE_ENDIAN or WEBRTC_ARCH_BIG_ENDIAN
```

Extend plugins/audio/iSAC/iSAC/typedefs.h with the defines for s390x (64 bit, big endian), and submit to a) OBS (by adding a patch) and b) upstream.
