**Description**

**Observation**

This is essentially the same issue as https://progress.opensuse.org/issues/115364 - but based on a different package moving its files: this time it's openssh

The files moved from the openSUSE specific location /usr/etc/pam.d to the upstream supported location /usr/lib/pam.d (as in the last tickets: files in /usr/lib are supposed to be copied to /etc/pam.d before modification, and modifications to happen in /etc/pam.d)

openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-security_pam@64bit fails in pam_login

**Test suite description**

**Reproducible**

Fails since (at least) Build 20220830 (current job)

**Expected result**

Last good: 20220829 (or more recent)

**Further details**

Always latest result in this scenario: latest
