#### Description

Seems like that the github workflow is behaving in a strange way on PRs:

- sometimes nothing happens and in a few seconds it succeeds
- sometimes it fails after a couple of minutes scan, with always the same findings, some very old keys

#### Expected behavior:

- should scan only the PR delta and not the entire repository

#### Reason

[https://github.com/trufflesecurity/trufflehog/issues/666](https://github.com/trufflesecurity/trufflehog/issues/666)

#### Suggestions

Once [trufflesecurity/trufflehog/issues/666](https://github.com/trufflesecurity/trufflehog/issues/666) has a fix, try it out in the test repo on the trufflehog branch, if all goes fine, reenable it for the master branch

#### Acceptance Criteria

1. AC1: Trufflehog is reenabled for the [master branch](https://github.com/trufflesecurity/trufflehog/issues/666)

#### History

2022-09-01 19:12 - szarate

- Project changed from SUSE QA to openQA Tests
- Category set to Infrastructure
- Status changed from New to Blocked

Waiting for bug to be fixed
