Description

cloud-netconfig fails to build with

```
[18s] cloud-netconfig-ec2-1.6-1.4.noarch.rpm: directories not owned by a package:
[18s]   - /etc/netconfig.d
```

This directory moved to /usr/libexec/netconfig/netconfig.d (see sysconfig-netconfig changes from 2022-06-27), therefore cloud-netconfig.spec needs to be updated for the new path. This means:

- in %install, add a make variable that gets only added for Tumbleweed:
  ```
  %if 0%{?suse_version} > 1550
  NETCONFDIR=%{_libexecdir}/netconfig/netconfig.d
  %endif
  ```

- in %files, change %{_sysconfdir}/netconfig.d/cloud-netconfig to the new path (again dependent on suse_version. Hint: you'll also need %else.)
