To make autodecline work at some point, we need to make sure packages build reliable. This task is a parent task for individual packages failing randomly.

**Subtasks:**
- action #1322: libarchive fails often (New)
- action #1357: boost fails on x86_64 with g++ crash (Resolved)
- action #1360: fix v4l-utils and xf86-input-wacom bootstraping (New)
- action #1363: libunistring fails randomly (Rejected)
- action #1808: python3-base fails randomly (New)
- action #2420: Make openjdk bootstrappable and remove cycles in TestDVD (Resolved)
