Editing of both wiki pages is blocked atm.
english one from abuse filter.

#6 - 2016-11-11 08:56 - lnussel

I've unlocked the German one temporarily. No idea about the English one. Christian, any idea?

#7 - 2016-11-11 08:56 - lnussel

you may also send me the wiki text, I can add it still

Looks like one of the AccessManager auth proxy IPs isn't on the whitelist yet. I just unblocked it.

(Actually I'm aware that there are two /24 subnets that are used by AccessManager, while the wiki only whitelists 4 IPs - but it's easier/faster to unlock an IP once a month than pushing a wiki config change through the Provo paperwork.)

@Ludwig: IP blocks are ignored for wiki admins - that's why you were still able to edit ;-)

#9 - 2016-11-11 09:27 - lnussel

does that blocking affect the whole English wiki? We are asking people to help polishing the 42.2 pages, so would be bad if the couldn't actually edit :)

#10 - 2016-11-11 09:48 - cboltz

Yes, IP blocks affect the whole wiki - otherwise they would be pointless ;-)

Interestingly complaints about being IP-blocked always came from SUSE employees, so it **seems** community users are less likely to hit the wiki with this specific AccessManager IP. Note that we are talking about (IIRC) n=4 here, so I wouldn't call it statistically significant ;-)

BTW: You (and all other wiki admins) can unblock such IP blocks on https://en.opensuse.org/Special:BlockList
