

openSUSE Leap 42.3 Release - action #14920

publishing and mirror setup

2016-11-21 10:19 - Inussel

Status:	Closed	Start date:	2016-11-28
Priority:	Normal	Due date:	2016-12-09
Assignee:	adrianSuSE	% Done:	100%
Category:	Release Engineering	Estimated time:	0.00 hour
Target version:	Working		
Description			
Set up OBS and Mirror system to handle the new distribution			
The ISOs and ftp tree needs to be set to be publish=enabled in OBS.			
<pre><enable arch="local" repository="images"/></pre>			
There is a script somewhere on the obs backend that determines what gets pushed where. Adrian or Coolo know. It needs to be adjusted to handle the new distribution.			
On pontifex /etc/rsyncd-internal.conf needs to have modules to allow obs to push to the right locations. Normally the repo and isos are pushed to a -Current directory, when releasing milestones the final location needs to be synced. Watch out for /etc/fstab bind mounting stuff.
