Description

Observation

openQA test in scenario sle-12-SP2-Desktop-DVD-Updates-x86_64-qam-regression-message@64bit fails in [evolution_meeting_pop](#) (now 404, see "latest" instead)

It's not reproducible per se, but either meeting_pop or meeting_imap pop up as failure once a day especially in SP2.

History

#1 - 2017-01-20 13:45 - okurz

This is an autogenerated message for openQA integration by the openqa_review script:

This bug is still referenced in a failing openQA test: qam-regression-message
<http://openqa.suse.de/tests/723887>

#2 - 2017-03-31 11:34 - okurz

- Subject changed from test fails in evolution_meeting_pop to [sle][x11regressions][qam]test fails many times in evolution_meeting_pop/imap (unreliable)

- Description updated

"latest" link added, original is 404. Looking at the history I see the scenario failing a lot in evolution_meeting_imap or evolution_meeting_pop. The test is very unreliable and annoying. Please improve robustness.

There are likely duplicate poo#18266 and poo#17596 on which [vsvecova](#) will work.
