Move of selected LSG QE machines NUE1 to PRG2e - orion

2024-01-16 19:24 - okurz

Description

Acceptance criteria

- AC1: orion usable from PRG2

Suggestions

- Follow https://jira.suse.com/browse/ENGINFRA-3735
- Ensure machine can be reached from o3
- Coordinate with QAC to make use of orion

- Status changed from In Progress to Feedback

@qe-c good news, the o3 machines orion+andromeda are ready to be used. Find details on [https://progress.opensuse.org/issues/153673](https://progress.opensuse.org/issues/153673) and [https://progress.opensuse.org/issues/153679](https://progress.opensuse.org/issues/153679) respectively. IPMI credentials for a remote installation are in [https://gitlab.suse.de/openqa/salt-pillars-openqa/-/blob/master/openqa/workerconf.sls#L2351](https://gitlab.suse.de/openqa/salt-pillars-openqa/-/blob/master/openqa/workerconf.sls#L2351) and the following line. How do you plan to proceed to make good use of those hardware resources?

#10 - 2024-05-13 12:08 - okurz

@Martin Loviska can you share the SD ticket and current status? Do you need further help regarding orion+andromeda setup or should we declare the low-level setup work for both from point of view of the tools team as “done”?

#11 - 2024-05-13 12:19 - okurz
- Status changed from Feedback to Resolved

Both orion+andromeda are properly marked in racktables with the current status. Current usable state verified by mloviska, resolving.
