Description

user story

As a visitor of openQA instance I would like to know the currently running openQA version. It is useful for instances I do not have ssh access to see the package version (e.g. <https://openqa.opensuse.org>)

acceptance criteria

- **AC1:** Show same version as available in packages, e.g. OBS package in devel:openQA
- **AC2:** For git deployed instances show unique version from git
- **AC3:** If no version can be found this is handled gracefully

tasks

- read version from rpm file if available
- read version using git describe
- provide git tag on master repo (see below)
- display version e.g. in footer
- can provide helper that are usable in branding so that vendors can tailor (that sounds weird)

further details

- "unique version from git" could be git describe based on a tag which is on a very old commit so that the counter value of commits after the tag has some use.

If this raise a security issue, it can require login to see it.

PR: <https://github.com/os-autoinst/openQA/pull/1316>

#6 - 2017-05-10 20:48 - okurz

Great work! Would you like to just assign the ticket to yourself and set the status to "In Progress"?

#7 - 2017-05-10 20:50 - okurz

^ I assume you could not assign the ticket to yourself as you were not "developer" in the project "openQA". Seems like you are faster than the "Onboarding" process ;-)

#8 - 2017-05-11 11:16 - EDiGiacinto

- Status changed from New to In Progress

- Assignee set to EDiGiacinto

Thanks :) seems i can now!

#9 - 2017-05-16 11:50 - EDiGiacinto

- Status changed from In Progress to Resolved

PR is merged now.
