Target version:			
Description			
Scenario			
Pkg A contains two spec file: A.spec and A-doc.spec. As usual, A-doc is linked to A and has devel pkg set to A, so that users branching A-doc get the right stuff			
If a delete request against A is now incoming, it cannot be accepted before A-doc is either delete or at least no longer has A set as devel project.			
The currently implemented order though is the other way around:			
<ul style="list-style-type: none">• Accept A• Check what spec files we lose in plus by this action, then delete linked packages			
This currently makes working with delete requests (of which more are coming due to python single-spec) quite painful
