I would like to remind that openSUSE Tumbleweed release is blocked by this, see

[opensuse-Tumbleweed-DVD-x86_64-Build20170403-autoyast_reinstall_gnome@64bit](#) and this is not new. [szarate](#), [coolo](#): I propose to urgently have a mitigation available.

Not even on osd - if the tests runs somewhere else than w7.

But o3 was officially deployed this morning - and it's fixed there now for real

It is passing on the latest job, marking as resolved.

It is failing again (sporadically? -> [osd#884048#previous](#)), could you take a look?
