All qa_automation tests are using /usr/share/qa/qaset/bin/junit_xml_gen.py script which I can't find anywhere.
assert_script_run("/usr/share/qa/qaset/bin/junit_xml_gen.py -n 'regression' -d -o /tmp/junit.xml /var/log/qaset");

Yong Sun, could you please take over this ticket?

Hi Yi, actually it fails not in what it test, so the log is useless. It's fails in openQA booting part. And it runs no problem in this moment.
All three stress run in acceptance tests are based on qa_run.pm, and the structure of it is too bloated. I think the suitable description for this issue is to raise up the debug ability for "qa_run.pm". So I create a new ticket to follow it, and assigned myself to it. <https://progress.opensuse.org/issues/19362>

Hope you don't mind I close this one.

Next time just update the existing ticket. The subject line can be simply rewritten and such. No need to create a new ticket.
