Description

Observation

openQA test in scenario sle-12-SP2-Server-DVD-Updates-x86_64-mau-qa_acceptance_fs_stress@64bit fails in [patch_and_reboot](#)

99% of all the "mau" tests are in incomplete status.

The problem seems to be here: https://openqa.suse.de/tests/917773/modules/patch_and_reboot/steps/1/src on the call \$self->system_login() which seems to be raising exception that appears in the logs:

```
`23:18:57.6656 1259 <<< testapi::send_key(key='esc')
DIE Virtio terminal does not support send_key. Use type_string (possibly with an
ANSI/XTERM escape sequence), or switch to a console which sends key presses, not
terminal codes.
at /usr/lib/os-autoinst/backend/baseclass.pm line 521.

at /usr/lib/os-autoinst/backend/baseclass.pm line 73.`
```

Reproducible

Fails since (at least) Build [20170505-1](#) (current job)

Expected result

Last good: [20170504-1](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

When using virtio_console, one needs to do select_console('root-console') before a reboot because grub does not use the serial console (for now atleast). See kernel/install_ltp.pm (https://openqa.suse.de/tests/918355/modules/install_ltp/steps/1/src).

#3 - 2017-05-05 16:57 - osukup

- Status changed from New to In Progress
- % Done changed from 0 to 100

fixed by <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/2844>

#4 - 2017-05-05 16:57 - osukup

- Status changed from In Progress to Resolved
