Hi [qmsu](#), I am pretty sure that your last PR caused [#19618](#), therefore reopening. Looking at the last good <https://openqa.suse.de/tests/950799/file/autoinst-log.txt> and comparing with <https://openqa.suse.de/tests/982855/file/autoinst-log.txt> I can see now that the password prompt is matched twice but then the grub menu is never properly found. The video link accessible from [https://openqa.suse.de/tests/982855#step/reboot\\_gnome/12](https://openqa.suse.de/tests/982855#step/reboot_gnome/12) should hopefully provide a better picture. Could you take a look please?

- Status changed from Feedback to Resolved

The issue had been fixed by PR#3122:  
Remove workaround\_type\_encrypted\_passphrase from reboot\_gnome
