Description

Observation

openQA test in scenario opensuse-42.3-DVD-x86_64-extra_tests_in_textmode@64bit fails in kdump_and_crash

Reproducible

Fails since (at least) Build 0163

Expected result

Last good: (unknown) (or more recent)

Further details

Always latest result in this scenario: latest

https://opengqa.opensuse.org/tests/408418#step/kdump_and_crash/18 shows core dumped. That's hardly a test issue. Is it?

I had a look of the instlog, and it seems to me that the test falls into loop because it can't find the matching needle yast2_console-finished from activate_kdump function: until (match_has_tag("yast2_console-finished")). We can either check for the needle in the repo, or change the function into simply sending keys without checking for the needle.

no this looks like real product problem, yast should not segfault with end of work

#6 - 29/05/2017 09:24 pm - okurz
- Assignee changed from okurz to lnussel

yes, please read the subject line of this ticket carefully. Also [http://openqa.opensuse.org/tests/408418/modules/kdump_and_crash/steps/18](http://openqa.opensuse.org/tests/408418/modules/kdump_and_crash/steps/18) looks pretty obvious: There is an error message with segfault.

@lnussel: can you comment why you think this is not a product issue? Or did you overlook the segfault?

#7 - 31/05/2017 02:21 pm - lnussel
- Assignee changed from lnussel to okurz

It is likely a yast problem but since the test doesn't collect any log files or core dumps after it failed I can hardly file a bug myself with the information available. So QA has to reproduce this.

#8 - 08/06/2017 12:49 pm - okurz

Logs are available now (that should be my change about using the log-console). I created a product bug with the corresponding log info now: [https://bugzilla.opensuse.org/show_bug.cgi?id=1043389](https://bugzilla.opensuse.org/show_bug.cgi?id=1043389)
