Also sle functional tests are failing on changing console e.g. https://openqa.suse.de/tests/972576#step/logpackages/3

I'm taking this ticket - since I already worked on some console login fixes yesterday and I am working on these fallouts right now

PR merged. I think it helps for zvm but still not done for zkvm. I moved the "handle_password_prompt" to before the SU, see https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/2997/files#diff-a2a433d5914343b617ae52ac0fb40524R409. But this seems to be not enough, see http://lord.arch/tests/6494#step/consoletest_setup/3 and http://lord.arch/tests/6494/file/autoinst-log.txt . The password string is sent but seems to have no effect. Maybe the original sleep is still needed here or a better way needs to be found, checking on zkvm.

http://lord.arch/tests/6496#step/consoletest_setup/3 shows that the password is typed twice now but it works. Investigating.
