[sle15sp1][desktop] Add a gdm case to allow user to set a password when they next login

2017-06-05 07:27 - qkzhu

Status:	Rejected	Start date:	2017-06-05
Priority:	Normal	Due date:	
Assignee:	yfjiang	% Done:	0%
Category:	New test	Estimated time:	0.00 hour
Target version:			
Difficulty:			
Description			
Steps			
<ol style="list-style-type: none">1. Go to Gnome Settings.2. Click on "Users" in the "System" category.3. Click "Unlock" and enter admin password.4. Click "+" to create a new user and select "Allow user to set a password when they next login".5. Log out and select the new user.			
Result			
Display a registration form that allows the user to enter their desired password.			
We can extend change_password.pm to cover this, but currently this scenario is blocked by: bsc#1040197 Impossible to log into new user account which was created with "set password on first login" https://bugzilla.suse.com/show_bug.cgi?id=1040197			
I will implement this when the bug is fixed.			

History

#1 - 2018-05-25 08:47 - yfjiang

- Subject changed from [sle][x11regressions] Add a gdm case to allow user to set a password when they next login to [sle15sp1][desktop] Add a gdm case to allow user to set a password when they next login

- Assignee changed from qkzhu to yfjiang

#2 - 2021-06-09 09:08 - GraceWang

- Status changed from New to Feedback

The relevant issue https://bugzilla.suse.com/show_bug.cgi?id=1040197 was set to RESOLVED WONTFIX.

So, I think there's no need to implement such a test case.

[yfjiang](#), [zcjia](#) what do you think about this?

#3 - 2021-11-15 07:07 - GraceWang

- Status changed from Feedback to Rejected

Talked offline and agree to resolve this as REJECTED since the bug https://bugzilla.suse.com/show_bug.cgi?id=1040197 was marked as WONTFIX.
