Target version:			
Difficulty:			
Description			
Observation			
openQA test in scenario sle-12-SP2-Server-DVD-Updates-x86_64-mau-extratests@64bit fails in kdump_and_crash			
Error message during package installation: Package 'kernel-default-debuginfo-4.4.59-92.23.1.x86_64' not found.			
Reproducible			
Fails since (at least) Build 20170623-5			
Expected result			
Last good: 20170623-4 (or more recent)			
Further details			
Always latest result in this scenario: latest			

History

#1 - 2017-06-26 11:31 - coolo

- Assignee set to osukup

this is because the kernel incident we install the kernel from has no debuginfos. They are in _debug - Ondrej will change the bot to mark kernel incidents

#2 - 2017-06-26 12:37 - mimi_vx

--> 1)check every incident in "incidents":"OS" if is kernel related and create var ""KERNEL_INCIDENT=%INCIDENT_NR%" to start job variables
--> 2) for all incidents in KERNEL_INCIDENT add repository with debuginfo to MAINT_TEST_REPO var in products/sle/main.pm or extend kdump_and_crash with similar funkcionalita ...

- Status changed from Feedback to Resolved

not sure why this was assigned to me

#5 - 2017-09-27 06:01 - okurz

because you assigned it to yourself as you created a PR...
