

invis-backup - action #23794

Implementing rdiff-backup-web to invis-server

2017-08-30 18:53 - flacco

Status:	Rejected	Start date:	2017-08-30
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>The invis-server own backup-solution "invis-rdbu" uses rdiff-backup as the main backup-tool.</p> <p>Restoring Data from a rdiff-backup repository isn't easy enough to give our users the oportunity to restore data from the backup by themself. Implementing the fuse-based rdiff-backup Filesystem in combination with rdiff-backup-web makes it much more easy to do this job.</p> <p>Ingo has allready build a rdiff-backup-fs package in our OBS Repos, no we can start implementing and testing rdiff-backup-web.</p> <p>rdiff-backup-web on Sourceforge: http://rdiffbackupweb.sourceforge.net/</p> <p>Caution: This software is in an early alpha state, perhaps it isn't stabel enough for our needs.</p>			

History

#1 - 2017-09-10 10:44 - ingogoeppert

- Target version set to 13.1

#3 - 2018-03-10 17:40 - ingogoeppert

- Project changed from invis-server to invisAD-setup

- Category deleted (Development)

- Target version deleted (13.1)

#4 - 2018-03-10 17:41 - ingogoeppert

- Project changed from invisAD-setup to invis-backup

#5 - 2020-06-10 09:49 - flacco

- Status changed from New to Rejected

It seems that rdiff-backup-web is no longer maintained.

Last commit on sourceforge was in 2010. A forked verison in github had it's last commit in 2014.

So I close this ticked.
