Don't know why the automatic reminder script deleted the checklist.

[Inusselhttps://openqa.opensuse.org/tests/611969#step/select\\_patterns\\_and\\_packages/75](https://openqa.opensuse.org/tests/611969#step/select_patterns_and_packages/75) still fails looking for quota-nfs which you have crossed off but I can't find the package in openSUSE:Leap:15.0 nor a submit request mentioning to drop it or something. Was this maybe removed in a different way?

quota-nfs is in the online repo but not on the DVD. any reason for specifically picking that package?
