Description

Observation

openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-kde-wayland@64bit_virtio fails in [sshxterm](#) asserting an xterm instead of the shown konsole.

Reproducible

Fails sporadically from time to time.

Expected result

Last good: <https://openqa.opensuse.org/tests/534668#step/sshxterm/2>

Problem

```
[ 17 Nov 2017 14:26:47-] < okurz > apparently the problem is in https://openqa.opensuse.org/tes
ts/534668#step/sshxterm/2 that only "erm" ends up in the desktop-runner, not "xterm". Then it star
ts konsole with a call to "su", therefore looking different and asking for password. So have you e
ver seen something like this before? If yes, then I would create a progress ticket to fix it
```

```
[ 17 Nov 2017 14:28:04-] < DimStar > have a look at 'last test' of this run; it is failing all
over the place; yesterday it was five runs with 5 different modules failing
```

```
[ 17 Nov 2017 14:29:10-] < DimStar > a common error seems indeed the launcher not to get all inp
uts (but I rather think thats plasma's wayland compositor not being up-to-par yet than being an op
enQA issue)
```

```
[ 17 Nov 2017 14:29:23-] < DimStar > the same does not happen when running the KDE-X tests
```

```
[ 17 Nov 2017 14:29:33-] < DimStar > (which implies more a boo ref than a progress item)
```

```
[ 17 Nov 2017 14:32:46-] < okurz > so that's the thing then, let's do a proper bug and a workar
ound for that. And *that* could be a progress ticket: to do a workaround for a wayland issue. And
*then* someone can blog about how openQA is so awesome it supports wayland development :)
```

```
[ 17 Nov 2017 14:35:26-] < DimStar > seems I travelled in time: https://bugzilla.opensuse.org/s
how_bug.cgi?id=1064836 :)
```

```
[ 17 Nov 2017 14:35:28-] < |Anna| > openSUSE bug 1064836 in openSUSE Tumbleweed (KDE Workspace
(Plasma)) "[Build 20171022] Plasma/Wayland is very fragile" [Normal,New]
```

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2018-05-13 10:22 - okurz

- Subject changed from [opensuse][sporadic]test fails in sshxterm - workaround(s) for "fragile" wayland to [opensuse][desktop][wayland][sporadic]test fails in sshxterm - workaround(s) for "fragile" wayland

#2 - 2021-06-09 09:15 - GraceWang

- Status changed from New to Resolved

Checked in the latest TW, the sshxterm is passed <https://openqa.opensuse.org/tests/1774439#step/sshxterm/7>
Also checked the results history, and didn't find sdxterm failure in the recent two months.
So, I will close this ticket as resolved.
