Category:	Concrete Bugs	Estimated time:	0.00 hour
Target version:			
Difficulty:			
Description			
Observation			
On startup of the script "openqa-scheduler" manually I get the following warning:			
<pre>Subroutine JSON::PP::Boolean::(0+ redefined at /usr/lib/perl5/5.18.2/overload.pm line 50 (#1) (W redefine) You redefined a subroutine. To suppress this warning, say { no warnings 'redefine'; eval "sub name { ... }"; }</pre>			
<pre>Subroutine JSON::PP::Boolean::(++ redefined at /usr/lib/perl5/5.18.2/overload.pm line 50 (#1) Subroutine JSON::PP::Boolean::(-- redefined at /usr/lib/perl5/5.18.2/overload.pm line 50 (#1)</pre>			
I don't see this warning when starting the service with <code>systemctl start openqa-scheduler</code> and then looking in the log with <code>journalctl -u openqa-scheduler</code> .			
Steps to reproduce			
<ul style="list-style-type: none">Start scheduler with <code>sudo -u geekotest script/openqa-scheduler</code>			
Further details			
On openSUSE Leap 42.3 with openQA latest git Thu Dec 7 06:57:33 2017 +0100 f8654aa3
