Description

Observation

openQA test in scenario sle-12-SP3-Server-DVD-Updates-x86_64-mau-extratests@64bit fails in [kdump_and_crash](#)

```
crash: /var/tmp/vmlinux-4.4.103-6.38-default.gz_z2ba5K: no debugging data available  
crash: vmlinux-4.4.103-6.38-default.debug: debuginfo file not found
```

```
crash: either install the appropriate kernel debuginfo package, or  
copy vmlinux-4.4.103-6.38-default.debug to this machine
```

kdump_and_crash logs attached

Reproducible

Fails since (at least) Build [20171226-3](#)

Expected result

Last good: [20171226-2](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2018-02-21 09:32 - okurz

- Subject changed from test fails in kdump_and_crash - debuginfo file not found to [qam]test fails in kdump_and_crash - debuginfo file not found

Is this still relevant? Have you found the cause? I suggest to add a tag to tickets and track the according backlog, e.g. all "[qam]" tickets.
