Description

-----BEGIN PGP SIGNED MESSAGE-----

Hash: SHA1

There are many duplicate mails (4 duplicates of a single post) appearing on the lists. The current suspect is suse.de machine.

Most affected are people using gmail, but others are affected.

You can see some samples below.

Cheers,

Carlos E. R.

FWIW, there's also a duplicate post by Felix Miata, Display artifacts in Leap 42.3 at 15:59 UTC and it doesn't seem that he's using google.

And also FWIW, I don't see duplicate messages from Andrei Borzenkov, and he uses gmail. So it's not a simple case of gmail duplicating everything it sends to suse.

I don't think you will ever see any duplicate while using a gmail account, because they delete them. You only get the first copy.

I don't use gmail. I don't have any google account.
(or facebook, twitter, linkedin etc etc :)

Andrei uses gmail as I said, and as does Dave P but not Felix.

I have seen duplicates from Andrei B.

I haven't today, I don't think. If you can give me a date and time of an occurrence, I can check.

3 and 4 have the ID 63so5571694lfv.4 at google, yet they get D5FB5AF86 and

9F078AEF6 at suse.de, and very different hours: 07:35:18, 01:24:06

case 1 and 2 have different IDs.

However, all have the same ID c79mr9984563lfc.44.1517077870684 at 10.25.28.82.

Felix Miata

In Felix case, note the identical identifier "1efStV-0002Nw-6z" at earthlink.net, while there are two at suse.de: 67C2BAF31 and 7374BAE0E

So, I don't think google is the culprit here, but suse.de server. Probably it is reporting to the preceding server that the receiving failed (or not reporting at all), while it did succeed. The preceding server tries again, some times six hours later.

IMHO, the issue is caused by mx2.suse.de

I haven't seen this problem on any other list, certainly. And it has got much, much worse here in the past few days. To the point it is an annoyance rather than an amusement now.

Yep.

Cheers,

Carlos E. R.
