Description

Observation

openQA test in scenario caasp-2.0-CaaSP-DVD-Incidents-x86_64-QAM-CaaSP-controller@qam-caasp_x86_64 fails in [stack_update](#)

After the upgrade from 1.7 up to 1.8, DEX is using new tokens which are not included in the old config. That we need to download the new config in that case.
This is bug (https://bugzilla.novell.com/show_bug.cgi?id=1081337), which we need to workaround.

Reproducible

Fails since (at least) Build [:6627:velum.1519121688](#) (current job)

Expected result

Last good: [:6716:aaa_base.1519060495](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2018-02-20 12:43 - pgeorgiadis

- Assignee set to pgeorgiadis
- % Done changed from 0 to 30

#2 - 2018-02-21 09:05 - pgeorgiadis

- Status changed from New to In Progress
- % Done changed from 30 to 100

Fix is ready, waiting for review: <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/4454>

#3 - 2018-02-23 10:57 - pgeorgiadis

- Status changed from In Progress to Resolved
