created new needle masking low space notification: chromium-main-window-gnome-80p_match-masked_update_notification-20180312

One needle succeeds but then following ones won't be fine. Better to create a bigger disk image.

[mitiao](#) could you handle that?

and btw, because we seem to have this problem on a regular base. Do you think you could note down the general procedure on a wiki? E.g.
http://progress.opensuse.org/projects/openqatests/wiki/ ?

I am not an admin of o3, so i created a large hdd with 40G for 42.2 on our openqa server hosted in NUE.
Please download it from here:

THanks, I downloaded the image to o3:/var/lib/openqa/share/factory/hdd/fixed/ as HDD_1=
opensuse-42.2-x86_64-Updates-20180313-2-gnome@64bit-2G.qcow2 and updated the test suite accordingly. Triggered once:
