**Description**

openQA test in scenario opensuse-15.0-NET-x86_64-update_Leap_42.2_kde@64bit fails in shutdown

The emoticon settings are opened not only in this case, also observed this in vlc tests.

**Tasks:**
- find out what's going on here
- stop that behaviour

**Reproducible**

Fails since (at least) Build 148.1

**Expected result**

Last good: 147.1 (or more recent)

**Further details**

Always latest result in this scenario: latest

**Related issues:**
- Related to openQA Tests - action # 31687: [opensuse][functional][medium][u] x11_start_program does not care if program can not be called in desktop runner even after three 'ret' presses with "valid" and "target_match" added
  
- Subject changed from [opensuse][functional][medium][research] test fails in shutdown - emoticon settings are opened to
  
- Target version set to Milestone 16

I don't know what you mean with the [research] label but for me this task is a standard "we need to understand what's going on and fix it" ticket. The research ones are more for "research what possibilities we have and present that to the team"

#3 - 31/03/2018 06:14 pm - okurz

- Due date set to 22/05/2018
I think this is caused by pressing enter too early when only e is pressed and therefore the emoticons settings are selected. If this is correct, we should fix it in x11_start_program.

I assume we are blocked here by #35215.

blocker is resolved - unblocking and moving to next sprint.

Also not seen for a long time, will close this.

Most likely fixed during:
https://progress.opensuse.org/issues/30805
https://openqa.opensuse.org/tests/740741#step/desktop_runner/6 looks similar but when we see it only once (and only once) we should not invest more time in this then a simple retrigger -> https://openqa.opensuse.org/tests/740769 let's see how it behaves.
