<b>Difficulty:</b>			

**Description**

### Observation

openQA test in scenario opensuse-15.0-DVD-x86\_64-extra\_tests\_on\_gnome@64bit fails in [yast2\\_lan\\_restart\\_devices](#)

### Reproducible

Fails since always on openSUSE Leap 15.0 in every run.

### Expected result

Apparently was never working for openSUSE Leap 15.0 but openSUSE Tumbleweed works: <https://openqa.opensuse.org/tests/652266>

### Further details

Always latest result in this scenario: [latest](#)

## History

### #1 - 2018-04-05 13:06 - okurz

- Subject changed from test fails in yast2\_lan\_restart\_devices to [sle][functional][y][fast]test fails in yast2\_lan\_restart\_devices
- Due date changed from 2018-04-12 to 2018-04-10
- Status changed from New to In Progress
- Assignee set to okurz
- Target version set to Milestone 15

I will take a look

### #2 - 2018-04-09 09:43 - okurz

- Subject changed from [sle][functional][y][fast]test fails in yast2\_lan\_restart\_devices to [sle][functional][leap15.0][y]test fails in yast2\_lan\_restart\_devices - never working for Leap 15.0
- Description updated
- Due date changed from 2018-04-10 to 2018-05-08
- Status changed from In Progress to Workable
- Assignee deleted (okurz)
- Target version changed from Milestone 15 to Milestone 16

Updated the description to make it clear that this test step was never working on openSUSE Leap 15.0 but on openSUSE Tumbleweed. It looks like a wrong keyboard shortcut is pressed on openSUSE Leap 15.0 so that a help window pops up instead of the expected one.

**#6 - 2018-04-20 13:21 - riararov**

- Status changed from *Resolved* to *Feedback*

Still some needle mismatches (most not related to the code change).

**#7 - 2018-04-23 07:37 - riararov**
