Ok, a few things which still needs enhancement in my opinion:

1. When using the route /tests/latest you get a DataTable error. To reproduce, just start your web UI locally and open http://localhost:9526/tests/latest#next_previous.
2. It would be nice if the query parameter for the limit is updated as before. For that purpose I've once written the helper functions `parseQueryParams()` and `updateQueryParams(params)` in `openqa.js`.
3. Reintroduce the link to the still valid URL for the latest job in general.

#3 - 2018-05-18 06:28 - mitiao

- Status changed from New to In Progress

Submitted PR <https://github.com/os-autoinst/openQA/pull/1656>
to fix DataTable error under /tests/latest and reintroduce the latest scenario URL

limit option will be in next PR

- Maybe reintroduce the URL for the latest job in general (if [okurz](#) needs it).

That's weird wording. Think 1k bug reports on bugzilla.opensuse.org reference that link that is commonly used to find out if the latest one still fails. If this URL is now suddenly invalid it could cause quite some confusion and frustration.

#5 - 2018-05-22 13:06 - mkittler

PR is merged. I can confirm that the *link* is back and the error gone. So only the 2nd point missing.

[okurz](#) Yes, the wording was wrong. The URL was never invalid, only the link has been removed.
