Leap 15.0 and Tumbleweed tests are not the same, so it would make sense to align them.

Moreover kde@64bit test is wrong for aarch64 and will not boot since it is designed for x86_64. See: https://openqa.opensuse.org/tests/681913#settings

I think it was just scheduled wrong. Since 15 days there seems to be no test kde@64bit in the aarch64 tests anymore so I guess this part is resolved?
- Target version changed from Milestone 19 to future

#5 - 2019-03-18 13:10 - ggardet_arm
- Status changed from New to Resolved
- Assignee set to ggardet_arm

Test sync done.

#6 - 2019-03-19 08:03 - SLindoMansilla
- Subject changed from [functional][u][aarch64] Leap 15.0 and Tumbleweed tests are not the same to [opensuse][aarch64] Leap 15.0 and Tumbleweed tests are not the same

Not resolved from u-team
