Estimated time: 0.00 hour

Description

Observation

openQA test in scenario sle-15-Installer-DVD-x86_64-gnome_install_smt@64bit fails in scc_registration because the mirror of SLES15-Updates and SLES15-Pool seems to be missing and/or outdated.

Reproducible

Fails since (at least) Build 652.1

Expected result

Last good: 652.1 (2018-05-27)

Acceptance criteria

- AC1: Documentation of how the SMT server is maintained and updated is referenced in this ticket (not just documented in this ticket)
- AC2: Test can access up-to-date resources for the corresponding builds

Suggestions

- Find out how test is supposed to work
- Find out who maintains the SMT server, e.g. ask in irc or mailing list, I assume QA SLE migration team
- Make sure the SMT server has the updated resources
- Make sure the test works again
- Optional: Improve post_fail_hook providing hints how to make sure the SMT server has the necessary resources

Further details

Always latest result in this scenario: latest

- Priority changed from Normal to High
- Target version set to Milestone 17

happening in SLE15 GMC.

#6 - 2018-06-13 09:04 - okurz
should be at least crosschecked in this sprint if the prio "high" is still valid.

#7 - 2018-06-13 13:48 - okurz

#13 - 2018-06-15 14:40 - riafarov
- Description updated

Issue may get fixed by increase of disk space. We may also consider to create multi-machine test, one of which uses YaST wizard to configure smt and then we conduct installation using this instance. Then we won't have issues with maintenance of the smt instance and can adjust scope to verify feature. Same is applicable to RMT, which is not yet integrated into installer.

#14 - 2018-06-15 18:47 - okurz
- Target version changed from Milestone 21+ to Milestone 21+

#15 - 2019-01-08 13:20 - okurz
- Target version changed from Milestone 21+ to future

#16 - 2020-10-21 09:47 - riafarov
- Status changed from Workable to Rejected
- Assignee set to riafarov

Seems to be very outdated. Rejecting as no action is planned for smt.
