

openSUSE Leap 15.1 - action #36787

copy sources of previous release

2018-06-05 11:29 - Inussel

Status:	Resolved	Start date:	2018-06-05
Priority:	Normal	Due date:	2018-06-15
Assignee:	m1in7442	% Done:	100%
Category:	Release Engineering	Estimated time:	0.00 hour
Target version:	Alpha		
Description			
First, ask an obs admin to prepare the "partitioning" setup of OBS for the new release. That makes sure rings and stagings end up on the correct backend. Also ask for dispatchprios to be adjusted. When done copy old project to new one with full history: <pre>\$ osc api /source/openSUSE:Leap:15.1?cmd=copy\&oproject=openSUSE:Leap:15.0\&withhistory=1\&comment=branch+from+15.0 -X POST \$ for i in \ NonFree \ Rings \ Rings:0-Bootstrap \ Rings:1-MinimalX \ Rings:2-TestDVD \ Staging Staging:A \ Staging:A:DVD; do \ echo \$i; \ osc api /source/openSUSE:Leap:15.1:\$i?cmd=copy\&oproject=openSUSE:Leap:15.0:\$i\&withhistory=1\&comment=branch+from+15.0 -X POST; \ done</pre>			
Ask an obs admin to copy the signkey for the staging projects from the previous release			
To adjust link files osc co -u the project, then			
<pre>sed -i -e 's/openSUSE:Leap:15.0/openSUSE:Leap:15.1/' */_link</pre>			
Fix non oss release file:			
<pre>osc api /source/openSUSE:Leap:15.1:NonFree/000release-packages/_aggregate -e</pre>			
<ul style="list-style-type: none">• make sure prjconf contains <code>_with_betatest</code> macros• don't forget <code>_service</code> in <code>_project</code>			
Fix rpmlint-AGGR in ring0			
<pre>osc api /source/openSUSE:Leap:15.1:Rings:0-Bootstrap/rpmlint-mini-AGGR/_aggregate -e</pre>

- Copied from action #24740: copy sources of previous release added

#2 - 2018-06-06 04:34 - m1in7442

will you create openSUSE:Leap:15.1 project? or shall I?

#3 - 2018-06-06 07:23 - Inussel

While we do have permission I'd recommend to talk to eg adrian to do it. He needs to set up the config in OBS for rings and stagings anyways

#4 - 2018-06-06 07:24 - Inussel

and not to forget the sign script, in case it needs adjustments
