Let's see, as recent tests on lord.arch failed again because packages over pkcon can not be installed, probably because the tw snapshot from o3 got removed I triggered new tests based on the most recent TW snapshot 20180719:

```

The results are ... inconclusive. The screen lock kicked in all the time earlier then expected. Don't know what to do about it now.

- Status changed from In Progress to Resolved

I consider my part done here for the LXDE specific part, however we have [#38387](#) as a generic ticket still open about gnucash close problems.
