**Description**

**Observation**

This issue was encountered before, almost each time we had to fix an IPMI test. But, since it was sporadic, we always end up fixing the test issue and we were not able to reproduce this issue.

- It can be a firmware issue for SOL console.
- It can be a product issue when loading driver at boot
  - On last good the drivers are loaded, while on error, this behavior is shown.
  - Last good: osd#last_good#video.ogv#t=23.00,25.00
  - Error: osd#error#video.ogv#t=29.00,31.00

**Reproducible**

- Scenario: sle-15-SP1-Installer-DVD-x86_64-btrfs@64bit-ipmi
  - osd#1860479/modules/boot_from_pxe/steps/10

**Expected result**

- From SLE15 GM: sle-15-Installer-DVD-x86_64-Build668.1-btrfs@64bit-ipmi
  - osd#1772527#step/boot_from_pxe/6

**Further details**

- Latest result in this scenario: osd#sle-15-Installer-DVD-x86_64-latest-btrfs@64bit-ipmi
