Good point. The release is probably more important than the conference countdown. Do we agree on May 22 as the release day? At 13:00 UTC? Or 14:00 UTC?

**#5 - 2019-03-13 15:27 - lnussel**

it's always 1200 UTC

Here is the update I have. Need to figure this out:

Hello,

Indeed ;-)

# /home/counter.opensuse.org/countdown.o.o/cron.sh -E -R
Needed template "opensuse-15.1-600x100-label.svg" is missing. Aborting

So either adjust the script to make the template name a separate option
(so that it continues to work with the files named *15.0*), or rename
all the svg files to 15.1.

Hint: adjusting the script is easier, search for PREFIX and introduce a
new variable, maybe TEMPLATE_VERSION.

FYI: Automated git pull for the counter will be available soon[tm] -
until then, ping me to get it deployed.

BTW: where should counter.o.o/link/ point to? Currently it redirects to
en.o.o/Portal:15.0 which doesn't sound like the best idea once the
countdown is about 15.1 ;-)

The countdown is no www.o.o but it links to 15.0

I made a commit to point it to 15.1 beta. Will need to update on the day off to point it back to https://software.opensuse.org/distributions/leap at which
point software.o.o will be pointing to 15.1. Keep the ticket open until the last day. Updated due date to reflect this.

I've filed https://github.com/openSUSE/software-o-o/issues/542 to provide a stable link the countdown can point to. This ticket is done. a new one will
track switching the link in case we don't get stable links by then #50687.

**#13 - 2019-05-02 14:05 - lnussel**

/testing actually redirects to /leap once the time is hit so not as bad. There's only a message saying that there is no test distribution.

**#14 - 2019-05-13 12:51 - lnussel**

stable links are implemented now

**#15 - 2019-05-14 06:51 - ddemaio**

Updated link on github. It's active.
