% Done: 0%
Estimated time: 0.00 hour

Description

Observation

openQA test in scenario opensuse-Tumbleweed-KDE-Live-x86_64-kde-live_installation@64bit fails in await_install

Reproducible

Fails since (at least) Build 20180827

Expected result

Last good: 20180820 (or more recent)

Further details

Always latest result in this scenario: latest

Watching the Video, this might be a race condition. The installer is running, installing packages, as one would expect. After some time, the ‘screenlock’ kicks in, which is detected by os-autoinst and acted upon. The installer shows back up and ‘seems to terminate right afterwards’ (possibly an additional ESC sent to yast?)

Move to new QSF-y PO after I moved to the "tools"-team. I mainly checked the subject line so in individual instances you might not agree to take it over completely into QSF-y. Feel free to reassign to me or someone else in this case. Thanks.

- Status changed from Blocked to Rejected

I guess we have missed the moment to investigate, but screensaver is disabled for the scenario, so mentioned cause should be resolved by now. However, I see that test is quite unstable, will file a ticket for that.
