Description

Hi,

I was trying to do a search for something only within the specified list, but keep getting hits from all mailing lists. This is what the query looks like:

http://lists.opensuse.org/cgi-bin/search.cgi?advanced=yes&query=rebuild&metaname=subject&list=opensuse-buildservice&subject=&from=&xtime=&ytime=&timeframe=

On the other hand, doing a simple search (i.e. filling out a field on the left) produced no results (there really should've been some).

Cheers,

Dejan

#3 - 22/02/2017 10:35 am - tampakrap
- Assignee changed from hennevogel to pjessen

#4 - 13/04/2017 08:13 am - pjessen

I can confirm the issue. Searching e.g. opensuse-medical, where I have only one post, gives me 306 results. The top 10 gives me 9 hits on some openFATE issue, and one from 'opensuse', but all dated 2011 or 2012.

I know nothing about the archive indexing setup, not sure when I will have the time to investigate. We also have a ticket suggesting we update the indexing engine to something more modern.
