Description	
Hi,	
when infrastructural tasks are created for a new openSUSE release, like, e.g. creating directories on d.o.o it would be great if we could extend those release checklist items to also do the very same thing for ports/aarch64 and ports/armv7l. That way the openSUSE ARM team doesn't have to figure out when things have been done and when they need to be replicated for ports.	
Could we add those items to the release checklist as well? or at least add a "send a ping to the opensuse arm team" ?
